## Office Automation Software Suite

**Toshiba Toolbox** combines Toshiba's e-BRIDGE "Utility" software into one convenient package. It is designed to improve business efficiency in areas of document input, management and output;

- ✓ **Reduce business expenses**
- ✓ **Help your business run more efficiently**
- ✓ **Improve your office productivity**

Toshiba Toolbox "Utility" software supports all current Toshiba Multi-Function Devices.

**Toshiba Toolbox "Office Automation Suite" includes:**

**Job Separator** – If you've ever had to count printed documents by hand you know how time consuming it is? **Job Separator** prints multiple sets of documents correctly collated to specified class or group numbers. Each set is even clearly labelled by a separator page ready for rapid distribution.

**Job Point** - Are your high volume print jobs time consuming? **Job Point** allows you to divide printing automatically between multiple Toshiba MFDs. One click and your document is printed on up to six available devices with speeds up to 510 pages per minute\*.

**Job Build** – Do you manually compile reports, tenders or documents from multiple formats such as Word, Excel and PDF? With one click, **Job Build** automatically combines various file formats, paper types and settings into one neatly printed document.

**Drop Zone** – Tired of wasting paper and misprinting important documents? This simple tool remembers specific print settings for you including the number of copies, staple position, and double-sided finishing options. Simply "drag and drop" your file onto the clever desktop icon and **Drop Zone** does the rest. Create as many unique "Drop Zones" as you like - there's no limit.

**Replicator** – Still using expensive multi-part forms that require impact printers? Toshiba's **Replicator** software allows you to print the same document from more than one paper tray or input source using coloured stationary. It even retains the settings for future jobs.

**PC and MAC Fax** – If time and motion are important Toshiba's PC Fax provides network faxing direct from your workstation. MAC Fax for OSX10.4/5 also supports Apple Address Book, Quick Fax settings and displays a handy preview before you send.
